Professional Profile

Digital product and experience professional with a background in **Product Analysis, UX Research and Customer Experience**. My focus is understanding what is happening in an experience, why it is happening, and which decisions can improve it for both users and the business.

I combine qualitative and quantitative research, journey and funnel analysis, behavioral metrics, and functional analysis. I work with clients, Marketing, Design, Product, Frontend, Backend and QA from discovery through validation, launch and iteration.

My previous web development experience helps me understand APIs, integrations, requests, logs and technical constraints. I also incorporate privacy, consent and responsible data-handling criteria into campaigns for Europe and Latin America, including hands-on experience with GDPR requirements.

How I Work

- Product Discovery, problem framing and needs assessment.
- Customer journeys, funnels, activation, engagement and friction points.
- UX Research: interviews, surveys, usability testing, heuristic evaluation and synthesis.
- Definition of flows, states, business rules, validations and functional requirements.
- Metric definition with Marketing and business teams using GTM/GA4, logs, database data and dashboards.
- Prioritization of improvements based on evidence, impact, effort and technical feasibility.
- Functional QA, production follow-up and continuous improvement.
- Insight storytelling and communication with technical and business stakeholders.

Professional Experience

Devecoop – Product Analysis, UX & Customer Experience *(Jan. 2023 – Present)*

- Work on the definition and evolution of digital products and experiences for international brands including Danone, Vichy, Poett, Clorox and Kimberly-Clark.
- Gather business, client and user needs; analyze journeys, behavior and friction across registration, onboarding, promotions, loyalty and engagement.
- Translate findings and briefs into flows, business rules, states, validations and functional requirements for Design and Development.
- Define, together with Marketing, the questions the business needs to answer and propose metrics using GA4/GTM, logs and database data to build useful dashboards for each campaign.
- Coordinate with UX, Design, Frontend, Backend and QA from discovery through production, including edge cases, dependencies, validations and incidents.
- Adapt experiences to multiple markets, languages and cultural contexts, incorporating privacy, consent and data-protection requirements.

Amapola Digital – Co-Founder | Digital Strategy & Analytics *(Jan. 2018 – Dec. 2023)*

- Managed digital projects end to end for clients across different industries.
- Defined events and conversions, implemented tracking through Google Tag Manager, and analyzed results in Google Analytics.
- Analyzed audiences, funnels, traffic, conversions and performance to identify problems and opportunities.
- Conducted market research and benchmarking, and worked across content strategy, Paid Media, SEO, SEM and email marketing.
- Prepared reports, insights and recommendations for clients, connecting business goals with real user behavior.
- Coordinated Design, Development, Content and Marketing teams, managing priorities, deliverables and multiple projects in parallel.

Sociopúblico / Comunidad Legal – Web Development *(2021 – 2023)*

- Developed and maintained web products using HTML, CSS, JavaScript, WordPress, Jekyll and Laravel.
- Worked with forms, integrations, APIs and troubleshooting; I now use this experience to bridge Product and Development teams.

Selected Projects and Decisions

MIND – turning campaigns into a product

After more than 22 campaigns, we identified recurring patterns across registration, points, quizzes, rewards, QR interactions, referrals, validations and measurement. MIND was created as a configurable white-label platform to reuse that foundation without losing flexibility. My contribution includes UX flows, functional definition, collaboration with Design and Development, and metric definition with Marketing. One evolution I proposed was making each campaign generate reusable data for future decisions. **Impact: development time was reduced from approximately 3 months to 1 month**, while adding a configurable analytics layer.

Danacol – using CX evidence to improve UX

I identified that the difference between accumulated points and available points could create confusion. The experience launched, and CX later began receiving questions about that part of the journey. I reviewed the cases with the team, used that evidence to support a design change, and we adjusted the naming, hierarchy and a progress card. **After the improvement, no further questions or complaints were reported about that confusion.** The experience reached **33,312 unique users and 910,781 QR interactions**.

Kimberly-Clark – designing around an unavoidable friction point

For a post-purchase WhatsApp promotion aimed at parents of young children, I designed a short journey from the brief, requesting only the information that was necessary. I anticipated that uploading the receipt would be the main friction point, but it was a business requirement to validate the purchase. The goal was to simplify everything around that step while also reducing messaging costs. **48,632** users started the journey, **32,677** completed registration (67%), and **19,931** completed participation (41% of total users; 61% of registered users).

Actimel – gaming, engagement and scale

Across Actimel campaigns, I worked on journeys, rules, validations, QR interactions, gaming mechanics and multi-market experiences. **Actimel Super Mario Bros** reached **345,326 unique users and 1,622,094 QR interactions**. **Actimel Pokémon** exceeded **1.4 million unique scans in Iberia during its first three months**. Metrics reflect the overall performance of products delivered by multidisciplinary teams.

Dercos / Vichy + Dadatina – connecting campaign and digital experience

I contributed to the digital experience linked to a campaign developed with the brand and Dadatina, translating content and communication needs into navigation, functional requirements and technical possibilities so that the website worked as a natural continuation of the campaign rather than as a separate piece.

Research, Insights & Teaching

Coderhouse – UX Research Instructor *(2026 – Present)*

- Teach problem framing, interviews, usability testing, journeys, heuristic evaluation and insight synthesis.

ISEC – Advertising Research Lecturer *(2026 – Present)*

- Teach qualitative, quantitative and mixed-method research, advertising effectiveness, concept testing, pre/post testing, media research and results communication.

Education

University of Vigo – Master's Degree in SME Management *(2025 – 2026)*
Strategy, management and innovation. Master's thesis grade: 10/10.
FLACSO – Postgraduate Program in Sociology and Political Science *(2015 – 2017)*
Universidad Tecnológica Nacional – Higher Education Teaching Degree *(2014 – 2016)*
UCES – Bachelor's Degree in Advertising *(2009 – 2013)*

Tools and Methods

Product & UX: Product Discovery, customer journeys, user flows, requirements, prioritization, Jira, Notion, Figma, Miro.
Research: interviews, surveys, usability testing, heuristic evaluation, desk research, qualitative and quantitative analysis.
Analytics: GA4, Google Tag Manager, funnels, conversions, SQL, MySQL, Excel, Google Sheets, logs and dashboards.
Technical Background: HTML, CSS/SCSS, JavaScript, Laravel Blade, Django Templates, WordPress, REST APIs and Git.
AI: ChatGPT, Claude, Gemini and GitHub Copilot applied to research, analysis, documentation and ideation.

Languages

Spanish: Native | **English:** Upper-intermediate (B2) | **Portuguese:** Conversational
